## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance: Regarding claim 7, Harel (US 6,128,472) teaches a response signal relay configured to receive a plural response signals from plural of the mobile stations in the multicast group (Col. 2 line 62-Col. 3 line 9 and Col. 4 line 36-Col. 5 line 12), receive a subsequent response signal to the common control signal from a second mobile station in the multicast group (Col. 2 line 62-Col. 3 line 9 and Col. 4 line 36-Col. 5 line 12), and the subsequent response signal received after the plural response signals, transfer only the plural response signals 440 (Fig. 4), and retain (sent to message processor) the subsequent response signal to the common control signal (Col. 2 line 62-Col. 3 line 9 and Col. 4 line 36-Col. 5 line 12).

Gosselin (WO 01/65885) teaches a control signal relay configured to transmit a common control signal to mobile stations in a multicast group (Page 4 line 30-Page 5 line 15); and a response signal relay configured to receive a predetermined number of response signals to the common control signal from plural of the mobile stations in the multicast group (Page 4 line 30-Page 5 line 15), receive a subsequent response signal to the common control signal from a second mobile station in the multicast group (Page 4 line 30-Page 5 line 15).

The prior art of record fails to teach a communication system comprising a base station; plural mobile stations; the plural mobile stations each configured to receive a common control signal from the base station, hold a response signal for a random

Art Unit: 2618

duration, the response signal is created in response to the common control signal, and transmit the response signal after the random duration; and the base station configured to receive plural response signals from plural mobile stations included in a multicast group, the number of the plural response signals is at least one, receive subsequent response signals from other of the plural mobile stations not included in the multicast group, transfer only the plural response signals received from the plural mobile stations included in the multicast group, and retain the subsequent response signals received from the other of the plural mobile stations not included in the multicast group.

Further applicant remarks filed on 4/23/2009 further states reasons for allowance.

Regarding claim 8, method claim 8 is allowed for the same reason as system claim 7 since the recited elements would perform the claimed steps.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Toth discloses a multicast support in packet switched wireless networks. Ohkubo discloses a multicasting method, multicasting system, mobile station and base station. Rune discloses a method in a cellular radio communications system. Jeong discloses a method for serving broadcasting type short message in radio data communication system. Mademann discloses a method and mobile communication network for providing multicast and/or broadcasting services. Sarkkinen discloses a multicast transmission to a radio access network. Casati discloses a method of sending a multicast message in such as a GPRS/UMTS network, and a mobile telecommunications network. Basu discloses a memory load balancing for single stream multicast.
